CHAPTER 1

2025 年转专业英语试题

Part I. Vocabulary and Structure

1. They always give the vacant seats to ( ) comes from.
   A. whoever B. whomever C. who D. whom
2. Though ( ) in a big city, Peter always prefers to paint the primitive scenes of countryside life.
   A. grown B. raised C. tended D. cultivated
3. Professor Wang, ( ) for his informative lectures, was warmly received by his students.
   A. knowing B. known C. to be known D. having known
4. Our manager is ( ) an important customer now and he will be back this afternoon.
   A. calling on B. calling in C. calling up D. calling for
5. A fire engine must have priority as it usually has to deal with some kind of ( ).
   A. precaution B. crisis C. emergency D. urgency
6. He said that the driver must have had an accident; otherwise he ( ).
   A. would have arrived B. must have arrived C. should arrive D. would arrive
7. The film provides a deep ( ) into a wide range of human qualities and feelings.
   A. insight B. imagination C. fancy D. outlook
8. It is high time that such practices ( ).
   A. are ended B. are being ended C. were ended D. must be ended
9. Urban crowdedness would be greatly relieved if only the ( ) charged on public transport were more reasonable.
   A. fees B. fares C. payments D. costs
10. The doctor had almost lost hope at one point, but the patient finally ( ).
    A. pulled out B. pulled through C. polled up D. polled over
11. Everyone should be ( ) to a decent standard of living and an opportunity to be educated.
    A. attributed B. entitled C. identified D. justified
12. We'd like to ( ) a table for five for dinner this evening.
    A. preserve B. retain C. reserve D. sustain

13. Vitamins are complex ( ) that the body requires in very small amounts.
A. matters B. materials C. particles D. substances

14. Apart from caring for her children, she has to take on such heavy ( ) housework as carrying water and firewood.
A. time-consumed B. time-consumed C. time-consuming D. timely-consuming

15. Anna was reading a piece of science fiction, completely ( ) to the outside world.
A. lost B. to be lost C. losing D. having been lost

16. The police are trying to find the ( ) of the woman killed in the traffic accident.
A. evidence B. recognition C. status D. identity

17. John doesn't believe in ( ) medicine; he has some remedies of his own.
A. standard B. regular C. routine D. conventional

18. Owing to ( ) competition among the airlines, travel expenses have been reduced considerably.
A. fierce B. strained C. eager D. critical

19. Although he had looked through all the reference material on the subject, he still found it hard to understand this point and her explanation only ( ) to his confusion.
A. extended B. amounted C. added D. turned

20. I'm surprised that a company with such a good ( ) would produce such poor-quality goods.
A. reality B. reputation C. regulation D. resemblance

Part II. Reading Comprehension

Passage One

2022 年 6 月大学英语四级考试

Oceanography

Oceanography has been defined as "The application of all sciences to the study of the sea". Before the nineteenth century, scientists with an interest in the sea were few and far between. Certainly Newton considered some theoretical aspects of it in his writings, but he was reluctant to go to sea to further his work.

For most people the sea was remote, and with the exception of early intercontinental travelers or others who earned a living from the sea, there was little reason to ask many questions about it, let alone to ask what lay beneath the surface. The first time that question "What is at the bottom of the oceans?" had to be answered with any commercial consequence was when the laying of a telegraph cable from Europe to America was proposed. The engineers had to know the depth profile (起伏形状) of the route to estimate the length of cable that had to be manufactured.

It was to Maury of the US Navy that the Atlantic Telegraph Company turned, in 1853, for information on this matter. In the 1840s, Maury had been responsible for encouraging voyages during which soundings (测深) were taken to investigate the depths of the North Atlantic and Pacific Oceans. Later, some of his findings aroused much popular interest in his book *The Physical Geography of the Sea*.

The cable was laid, but not until 1866 was the connection made permanent and reliable. At the early attempts, the cable failed and when it was taken out for repairs it was found to be covered in living growths, a fact which

defied contemporary scientific opinion that there was no life in the deeper parts of the sea.

Within a few years oceanography was under way. In 1872 Thomson led a scientific expedition (考察), which lasted for four years and brought home thousands of samples from the sea. Their classification and analysis occupied scientists for years and led to a five-volume report, the last volume being published in 1895.

Passage Two

2022 年 6 月大学英语六级考试

Science Communication

A few weeks ago, a well-meaning professor tried to explain the physiological process behind viruses and the human body in a tweet and was immediately criticized for a mistake in his information. He then issued an apology and deleted his erroneous tweet.

Communicating science beyond the academic bubble is necessary to augmenting public understanding of health and environmental issues and helping individuals make well-informed personal decisions.

However, scientists who engage in science communication must acknowledge that even in their area, their expertise is deep but narrow. They need to recognize the constraints in their own knowledge. That is not to suggest that they only write or present on their own research, but rather, that they consult with an expert if the topic is outside of their discipline. Fact-checking with a scientist who works in the specialty will prevent the unintentional spread of misinformation, and the process of doing so may yield tiny pieces of interesting new information that can be incorporated.

Some have argued that the public is not educated enough to understand scientific information, especially for any complex phenomena, but this is absurd. Science instruction can be found at all levels of public education with most secondary schools offering classes on biology, physics, and chemistry. If anything, social media has shown that the public craves knowledge based on a solid scientific foundation. Even the public discourse that follows most scientific articles shows that online readers can understand even the most baffling of scientific principles.

It is equally imperative to emphasize that being an expert on a topic does not automatically make a scholar qualified to communicate it to a nonscientific audience. A number of scientists recently have been offering public-aimed explanations of scientific phenomena. Even though they have appropriate credentials, they often do very little in the way of explaining. One biologist shared an intricate analogy involving a library, books, paper, a recipe, ingredients, and a cake to explain the process behind vaccines. Any explanation that requires a written key to keep track of what each item represents is not a clear example for public consumption.

Science communication is a science in and of itself. It requires rigorous training and instruction. A scientist should take communication courses that can teach a person how to identify and eliminate jargon and how to develop effective analogies to explain complex concepts. One cannot assume communication expertise—imagine if someone just decided that they were a physicist and started trying to contribute to the field without the necessary background. Doing a poor job communicating science to the public will only create confusion and widen the gap between science and society, a gap that scientists are trying to close.

Passage Three

2019 年 12 月大学英语四级考试

The Environmental Impact of Microwave Ovens

Popping food into the microwave for a couple of minutes may seem utterly harmless, but Europe's stock of these quick-cooking ovens emit as much carbon as nearly 7 million cars, a new study has found. And the problem is

growing. With costs falling and kitchen appliances becoming "status" items, owners are throwing away microwaves after an average of eight years. This is pushing sales of new microwaves which are expected to reach 135 million annually in the EU by the end of the decade.

A study by the University of Manchester calculated the emissions of CO_2—the main greenhouse gas responsible for climate change—at every stage of microwaves, from manufacture to waste disposal. "It is electricity consumption by microwaves that has the biggest impact on the environment," say the authors. The authors also calculate that the emissions from using 19 microwaves over a year are the same as those from using a car. According to the same study, efforts to reduce consumption should focus on improving consumer awareness and behaviour. For example, consumers could use appliances in a more efficient way by adjusting the time of cooking to the type of food.

However, David Reay, professor of carbon management, argues that, although microwaves use a great deal of energy, their emissions are minor compared to those from cars. In the UK alone, there are around 30 million cars. These cars emit more than all the microwaves in the EU. Backing this up, recent data show that passenger cars in the UK emitted 69 million tons of CO_2 in 2015. This is 10 times the amount this new microwave oven study estimates for annual emissions for all the microwave ovens in the EU. Further, the energy used by microwaves is lower than any other form of cooking. Among common kitchen appliances used for cooking, microwaves are the most energy efficient, followed by a stove and finally a standard oven. Thus, rising microwave sales could be seen as a positive thing.

Passage Four

2024 年 3 月 6 日托福考试

The Commercialization of Agriculture in the United States

Thomas Jefferson, a founding father of the United States, believed that farmers were the foundation of American democracy. To execute his plan for democracy, Jefferson proposed the United States Rectangular Land Survey—familiarly known as the grid. Under the plan, surveyors were first sent to eastern Ohio with instructions to divide the land into boxes that would measure six miles square. Then they were instructed to divide these larger boxes into smaller ones, one-mile square, which were divided yet again into quarter sections measuring 160 acres each, considered to be the appropriate size for a single farm. In 1785 Congress passed the grid into law, and from that point on the same checkerboard pattern was etched across the west—one of the most far-reaching attempts at rationalizing a landscape in world history.

The grid was the outward expression of a culture wedded not simply to democracy but to markets and exchange as well. It would aid in the rapid settlement of the country, turning millions of Americans into independent landowners, while at the same time transforming the land itself—its varied topography, soil, and water conditions—into a commodity, a uniform set of boxes easily bought and sold. But the grid was only the first step in the commercialization of western farmlands.

Once farmers purchased land they needed to plow up the existing vegetation. The grasses that thrived on the organically rich, deep soil laid down by the glaciers thousands of years earlier were at first a challenge to cut. Wooden plows with edges made of iron proved virtually useless. The development and spread of the steel plow—invented in 1837 by John Deere, an Illinois blacksmith—made plowing successful. In place of the native vegetation, farmers planted corn and wheat, domesticated species of grass that grow best in a monocultural environment, that is, in fields by themselves. These crops tend to grow quickly, storing carbohydrates in their seeds. With bread constituting a major component of the American diet, wheat would eventually emerge as the west's major cash crop; acres and acres of some of the world's best agricultural land in states such as Ohio, Indiana, Illinois, Iowa, and Kansas were plowed up and given over to the plant.

In the early years of settlement, farmers grew a variety of grains, including wheat, corn, oats, rye, and barley. Increasingly, however, farmers became more specialized, as commercial agriculture, aided by improved railroad transportation, proceeded apace. Much of the grain ended up in the northeast, where, by the 1840s, population growth had outstripped the local farm economy's ability to provide. In effect, the west's surplus of soil wealth underwrote industrial development far to the east.

The railroads not only delivered the products of the rich soils of the western grasslands into the stomachs of easterners, they also changed the meaning of the crops themselves. With waterborne transportation, farmers put their grain into sacks so they could easily be loaded into the irregularly shaped holds of steamboats. The advent of the railroads and steam-powered grain elevators (first developed in 1842) spurred farmers to eliminate the sack altogether. Now grain would move like a stream of water, making its journey to market with the aid of a mechanical device that loaded all the wheat from a particular area into one large grain car. Sacks had preserved the identity of each load of grain. With the new technology, however, grain from different farms was mixed together and sorted by grade. The Chicago Board of Trade (established in 1848) divided wheat into three categories—spring, white winter, and red winter—applying quality standards to each type. Wheat was turned into an abstract commodity, with ownership over the grain diverging from the physical product itself. By the 1860s, a futures market in grain had even emerged in Chicago. It was now possible to enter into a contract to purchase or sell grain at a particular price. What was being marketed here was not the physical grain itself so much as an abstraction, the right to trade something that may not even have been grown yet.

Part III. Cloze Test

2022 年 6 月大学英语六级考试

Thinking kind thoughts about yourself and your loved ones can prove beneficial for your overall wellbeing, empirical evidence has shown. Researchers carried out an investigation to explore the __26__ between having kind thoughts and a person's psychological state.

For the study, five groups of participants were presented with a different set of audio instructions, some of which encouraged the participants to think __27__ about themselves and others which persuaded them to think in a self-critical manner. After listening to the audio instructions, the participants were asked to answer a series of questions. These included whether they felt agitated, how likely they were to show kindness to themselves and how __28__ they felt to other individuals.

The participants who were instructed to think kindly about themselves were more likely to exhibit a bodily response associated with being relaxed and feeling safe. Their heart rates also dropped, which is a healthy sign of a heart that can respond flexibly to situations. Yet, __29__, those who listened to the critical audio clips were noted as having a higher heart rate and sweat response afterwards, both of which __30__ feelings of threat and distress.

Having the ability to switch off the body's natural threat response can __31__ a person's immune system. This, in turn, gives them a greater likelihood of recovering quickly from illness. These findings help us to further understand some of our clinical trials research findings, where we show that individuals with __32__ depression benefit particularly from self-awareness-based __33__ therapy. They essentially learn to become more sympathetic to themselves.

The sense is that for people __34__ to depression, meeting their negative thoughts and feelings with __35__ is a radically different way; that these thoughts are not facts. It introduces a different way of being and knowing that is quite transformative for many people.

Part IV. Writing

Directions: Write an essay that begins with the sentence: "People are now increasingly aware of the challenges in making a decision when faced with too many choices." You should write at least 250 words.

华中科技大学转专业交流群

CHAPTER 2

2024 年转专业英语试题

Part I. Vocabulary and Structure

1. They took ( ) measures to prevent poisonous gases from escaping.
   A. fruitful　　B. beneficial　　C. valid　　D. effective
2. Careful surveys have indicated that as many as 50 percent of patients do not take drugs ( ) directed.
   A. like　　B. so　　C. of　　D. as
3. In developing countries people are ( ) into overcrowded cities in great numbers.
   A. breaking　　B. filling　　C. pouring　　D. hurrying
4. There are other problems which I don't propose to ( ) at the moment.
   A. go into　　B. go around　　C. go for　　D. go up
5. It's quite necessary for a qualified teacher to have good manners and ( ) knowledge.
   A. extensive　　B. expansive　　C. intensive　　D. expensive
6. A love marriage, however, does not necessarily ( ) much sharing of interests and responsibilities.
   A. take over　　B. result in　　C. hold on　　D. keep to
7. The ability to store knowledge makes computers different from every other machine ( ) invented.
   A. ever　　B. thus　　C. yet　　D. as
8. The sports meeting, originally due to be held last Friday, was finally ( ) because of the bad weather.
   A. set off　　B. broken off　　C. worn off　　D. called off
9. After the robbery, the shop installed a sophisticated alarm system as an insurance ( ) further losses.
   A. for　　B. from　　C. against　　D. towards
10. A healthy life is frequently thought to be ( ) with the open countryside and homegrown food.
    A. tied　　B. bound　　C. involved　　D. associated
11. ( ) they reached the center of the city, they stopped the car at a bar.
    A. Before a mile or so when　　B. For a mile or so after
    C. Further than a mile or so　　D. A mile or so before

12. They are teachers and don't realize ( ) to start and run a company.
A. when it takes B. what it takes C. what they take D. what takes them

13. In Australia the Asians make their influence ( ) in business large and small.
A. feeling B. feel C. felt D. to be felt

14. It is recommended that the project ( ) until all the preparations have been made.
A. isn't started B. will not be started C. not be started D. isn't to be started

15. Government reports, examination compositions, legal documents and most business letters are the main situations ( ) formal language is used.
A. in which B. on which C. in that D. at what

16. If the building project ( ) by the end of this month is delayed, the construction company will be fined.
A. to be completed B. is completed C. being completed D. completed

17. Turn on the television or open a magazine and you ( ) advertisements showing happy families.
A. are often seeing B. had often seen C. will often see D. have often seen

18. The president promised to keep all the board members ( ) of how the negotiations were going on.
A. informed B. inform C. be informed D. informing

19. An Olympic Marathon is 26 miles and 385 yards, approximately ( ) from Marathon to Athens.
A. distance B. is the distance C. the distance D. the distance is

20. ( ) in the US, St Louis has now become the 24th largest city.
A. The 4th biggest city it was B. Once the 4th biggest city
C. Being the 4th biggest city D. It was once the 4th biggest city

Part II. Cloze Test

Organized volunteering and work experience has long been a vital companion to university degree courses. Usually it is left to __50__ to deduce the potential from a list of extracurricular adventures on a graduate's resume, but now the University of Bristol has launched an award to formalize the achievements of students who __51__ time to activities outside their courses. Bristol PluS aims to boost students in an increasingly competitive job market by helping them acquire work and life skills as well as __52__ qualifications.

"Our students are a pretty active bunch, but we found that they didn't __53__ appreciate the value of what they did outside the lecture hall," says Jeff Goodman, director of careers and employability at the university. "Employers are much more __54__ than they used to be. They used to look for __55__ and saw it as part of their job to extract the value of an applicant's skills. Now they want students to be able to explain why those skills are __56__ to the job."

Students who sign up for the awards will be expected to complete 50 hours of work experience or __57__ work, attend four workshops on employability skills, take part in an intensive skills-related activity __58__, crucially, write a summary of the skills they have gained. __59__ efforts will gain an Outstanding Achievement Award. Those who perform best on the sports field can take the Sporting Plus Award, which fosters employer-friendly sports accomplishments.

The experience does not have to be __60__ organized. "We're not just interested in easily identifiable skills," says Goodman. "__61__, one student took the lead in dealing with a difficult landlord and so __62__ negotiation

skills. We try to make the experience relevant to individual lives."

Goodman hopes the __63__ will enable active students to fill in any gaps in their experience and encourage their less-active __64__ to take up activities outside their academic area of work.

50.	A. advisors	B. specialists	C. critics	D. employers
51.	A. divide	B. devote	C. deliver	D. donate
52.	A. artistic	B. technical	C. academic	D. interactive
53.	A. hardly	B. possibly	C. necessarily	D. gracefully
54.	A. generous	B. considerate	C. imaginative	D. demanding
55.	A. origin	B. background	C. popularity	D. potential
56.	A. relevant	B. responsive	C. reluctant	D. respective
57.	A. casual	B. selective	C. homely	D. voluntary
58.	A. or	B. thus	C. so	D. and
59.	A. Occasional	B. Exceptional	C. Informative	D. Relative
60.	A. roughly	B. commonly	C. formally	D. fortunately
61.	A. For instance	B. In reality	C. In contrast	D. Of course
62.	A. demonstrated	B. determined	C. operated	D. involved
63.	A. device	B. section	C. scheme	D. disturbance
64.	A. attendants	B. agents	C. members	D. peers

Part III. Reading Comprehension

Passage One

Most kids grow up learning they cannot draw on the walls. But it might be time to unlearn that training—this summer, a group of culture addicts, artists and community organizers are inviting New Yorkers to write all over the walls of an old house on Governor's Island.

The project is called Writing On It All, and it's a participatory writing project and artistic experiment that has happened on Governor's Island every summer since 2013.

"Most of the participants are people who are just walking by or are on the island for other reasons, or they just kind of happen to be there," Alexandra Chasin, artistic director of Writing On It All, tells Smithsonian.com.

The 2016 season runs through June 26 and features sessions facilitated by everyone from dancers to domestic workers. Each session has a theme, and participants are given a variety of materials and prompts and asked to cover surfaces with their thoughts and art. This year, the programs range from one that turns the house into a collaborative essay to one that explores the meaning of exile.

Governor's Island is a national historic landmark district long used for military purposes. Now known as "New York's shared space for art and play," the island, which lies between Manhattan and Brooklyn in Upper New York Bay, is closed to cars but open to summer tourists who flock for festivals, picnics and adventures, as well as

these “legal graffiti” sessions.

The notes and art scribbled on the walls are an experiment in self-expression. So far, participants have ranged in age from 2 to 85. Though Chasin says the focus of the work is on the activity of writing, rather than the text that ends up getting written, some of the work that comes out of the sessions has stuck with her.

“One of the sessions that moved me the most was state violence on black women and black girls,” says Chasin, explaining that in one room, people wrote down the names of those killed because of it. “People do beautiful work and leave beautiful messages.”

Passage Two

While human achievements in mathematics continue to reach new levels of complexity, many of us who aren’t mathematicians at heart (or engineers by trade) may struggle to remember the last time we used calculus.

It’s a fact not lost on American educators, who amid rising math failure rates are debating how math can better meet the real-life needs of students. Should we change the way math is taught in schools, or eliminate some courses entirely?

Andrew Hacker, Queens College political science professor, thinks that advanced algebra and other higher-level math should be cut from curricula in favor of courses with more routine usefulness, like statistics.

“We hear on all sides that we’re not teaching enough mathematics, and the Chinese are running rings around us,” Hacker says. “I’m suggesting we’re teaching too much mathematics to too many people. Not everybody has to know calculus. If you’re going to become an aeronautical engineer, fine. But most of us aren’t.”

Instead, Hacker is pushing for more courses like the one he teaches at Queens College: Numeracy 101. There, his students of “citizen statistics” learn to analyze public information like the federal budget and corporate reports. Such courses, Hacker argues, are a remedy for the numerical illiteracy of adults who have completed high-level math like algebra but are unable to calculate the price of, say, a carpet by area.

Hacker’s argument has met with opposition from other math educators who say what’s needed is to help students develop a better relationship with math earlier, rather than teaching them less math altogether.

Maria Droujkova is a founder of Natural Math, and has taught basic calculus concepts to 5-year-olds. For Droujkova, high-level math is important, and what it could use in American classrooms is an injection of childlike wonder.

“Make mathematics more available,” Droujkova says. “Redesign it so it’s more accessible to more kinds of people: young children, adults who worry about it, adults who may have had bad experiences.”

Pamela Harris, a lecturer at the University of Texas at Austin, has a similar perspective. Harris says that American education is suffering from an epidemic of “fake math”—an emphasis on rote memorization of formulas and steps, rather than an understanding of how math can influence the ways we see the world.

Andrew Hacker, for the record, remains skeptical.

“I’m going to leave it to those who are in mathematics to work out the ways to make their subject interesting and exciting so students want to take it,” Hacker says. “All that I ask is that alternatives be offered instead of putting all of us on the road to calculus.”

Passage Three

Perhaps it is time for farmers to put their feet up now that robots are used to inspect crops, dig up weeds, and even have become shepherds, too. Commercial growing fields are astronomically huge and take thousands of man-hours to operate. One prime example is one of Australia’s most isolated cattle stations, Suplejack Downs in the Northern Territory, extending across 4,000 square kilometers, taking over 13 hours to reach by car from the nearest major town—Alice Springs.

The extreme isolation of these massive farms leaves them often unattended, and monitored only once or twice a year, which means if the livestock falls ill or requires assistance, it can be a long time for farmers to discover.

However, robots are coming to the rescue.

Robots are currently under a two-year trial in Wales which will train "farmbots" to herd, monitor the health of livestock, and make sure there is enough pasture for them to graze on. The robots are equipped with many sensors to identify conditions of the environment, cattle and food, using thermal and vision sensors that detect changes in body temperature.

"You've also got color, texture and shape sensors looking down at the ground to check pasture quality," says Salah Sukkarieh of the University of Sydney, who will carry out trials on several farms in central New South Wales.

During the trials, the robot algorithms and mechanics will be fine-tuned to make it better suited to ailing livestock and ensure it safely navigates around potential hazards including trees, mud, swamps and hills.

"We want to improve the quality of animal health and make it easier for farmers to maintain large landscapes where animals roam free," says Sukkarieh.

The robots are not limited to herding and monitoring livestock. They have been created to count individual fruit, inspect crops, and even pull weeds.

Many robots are equipped with high-tech sensors and complex learning algorithms to avoid injuring humans as they work side by side. The robots also learn the most efficient and safest passages, and allow engineers and farmers to analyze and better optimize the attributes and tasks of the robot, as well as provide a live stream giving real-time feedback on exactly what is happening on the farms.

Of course, some worry lies in replacing agricultural workers. However, it is farmers that are pushing for the advancements due to ever-increasing labor vacancies, making it difficult to maintain large-scale operations.

The robots have provided major benefits to farmers in various ways, from hunting and pulling weeds to monitoring the condition of every single fruit. Future farms will likely experience a greater deal of autonomy as robots take up more and more farm work efficiently.

Passage Four

In the last half of the sixteenth century England emerged as a commercial and manufacturing power in Europe due to a combination of demographic, agricultural and industrial factors. The population of England and Wales grew rapidly from about 2.5 million in the 1520s to more than 3.5 million in 1580, reaching about 4.5 million in 1610. Reduced mortality rates and increased fertility, the latter probably generated by expanding work opportunities in manufacturing and farming (leading to earlier marriage and more children), explained this rapid rise in population. While epidemics and plague occasionally took their toll, the people in England still suffered less than did those in continental Europe. Furthermore, the country had been pulled out of the war that occurred in France and central Europe during the same period. England provides the prominent example of the expansion of agricultural production well before the general European agricultural revolution of the eighteenth and nineteenth centuries. A larger population stimulated the increased woollen and crop cultivation. English agriculture became more efficient and market-oriented than almost anywhere else on the continent. Between 1450 and 1640 the yield of grain per acre increased by at least thirty percent. In sharp contrast with farming in Spain, English landowners brought more dense marshes and woodlands into cultivation.

The great land estates of English society largely remained intact and many wealthy landowners aggressively increased the size of their holdings, a precondition for increased productivity. Marriages between the children of landowners also increased the size of land estates. Primogeniture (the full inheritance of land by the eldest son) helped prevent land from being subdivided. Younger sons of independent landowners left the family and went to find other respective locations. Larger farms contributed more to commercialized farming at a time when an

expanding population pushed up demand and prices. Farmland owners turned part of their land into pasture for sheep in order to adapt to the developing woollen trade.

Some of the great landowners, as well as yeomen (farmers whose holdings and security of land tenure guaranteed their prosperity and status), organized their holdings in the interest of efficiency. Many farmers selected crops for sale in the growing London market. In their quest for greater profits, many landowners put the squeeze on their tenants. Between 1580 and 1620 landlords raised rents and altered conditions of land tenure in their favor, preferring shorter leases and forcing tenants to pay an entry fee before agreeing to rent them land. Landlords evicted those who could not afford the new, more onerous terms. But they also pushed tenants toward more productive farming methods, including crop rotation. England's exceptional economic development also drew on the country's natural resources, including iron, timber and coal, extracted in far greater quantity than elsewhere on the continent. New industrial development expanded the production of iron and pewter in and around the city of Birmingham.

But above all, textile manufacturing transformed the English economy. Woollens, which accounted for eighty percent of exports, worsteds (sturdy yarn spun from combed wool fibers), and other cloth found eager buyers in England as well as on the continent. Moreover, late in the sixteenth century, as English merchants began making forays across the Atlantic, these textiles were also sold in the Americas. Cloth manufacturers undercut production by urban craftspeople by "putting out" work to the villages and farms of the countryside. In such domestic industry poor rural women could spin and do carding (combing fibers in preparation for spinning) in their homes.

The English textile trade was closely tied to Antwerp, in the Spanish Netherlands, where workers dyed English cloth. The entrepreneur Sir Thomas Gresham became England's representative there. He so enhanced the reputation of English business in that region that English merchants could operate on credit—the most prominent achievement for the sixteenth century. He also advised the government to explore the economic possibilities of the Americas, which led to the first concerted efforts at colonization, undertaken with commercial profits in mind.

Part IV. Writing

The importance of having a sense of social responsibility.（不少于 250 词）

CHAPTER 3

2023 年转专业英语试题

Part I. Vocabulary and Structure

1. To spell the past form of the following words when used as verbs, to which one should we first add "-k-" and then "-ed"?

   A. lock　　B. panic　　C. pick　　D. arch

2. Guests ( ) and screamed when the bomb exploded.

   A. panicked　　B. mimicked　　C. picnicked　　D. trafficked

3. Of the following words, the underlined part of which one is pronounced differently in American English and in British English?

   A. scheme　　B. school　　C. schedule　　D. scholar

4. How is the word *schedule* pronounced in American English?

   A. /SHED-yool/　　B. /SHED-jool/　　C. /SKED-jool/　　D. /SKID-jool/

5. The discovery of penicillin, famously, was a happy ( ).

   A. ending　　B. medium　　C. hour　　D. accident

6. They are looking for a happy ( ), a house that is not too big but that has lots of storage space.

   A. ending　　B. medium　　C. hour　　D. accident

7. I wish you many happy ( ) of the day.

   A. endings　　B. hours　　C. returns　　D. accidents

8. Until his appointment becomes official, Ted is keeping a low ( ).

   A. voice　　B. spirit　　C. profit　　D. profile

9. A horse ( ), but a cow ( ).

   A. neighs, lows　　B. lows, neighs　　C. barks, roars　　D. roars, barks

10. A tiger ( ), but a wolf ( ).

    A. howls, roars　　B. roars, howls　　C. grunts, croaks　　D. croaks, grunts

11. To clean a water bottle which has been used for a long time, white vinegar can be used to remove ( ) from the inner surface of the bottle.

    A. rubbish　　B. scale　　C. dust　　D. mud

12. The map is drawn to the standard ( ) of 1/100,000, so there is not much detail.
A. line B. scale C. level D. scope

13. Nuclear weapons cause destruction on a massive ( ).
A. size B. rate C. scale D. range

14. The sails ( ) themselves with wind.
A. were filled B. had been filled C. filled D. would be filled

15. The book is ( ). You should have returned it to the library last week.
A. due B. overdue C. expired D. exceeded

16. He had lived illegally in the United States for five years after his visitor's visa ( ).
A. was due B. was overdue C. exceeded D. expired

17. He tried to keep a(n) ( ) between work and relaxation.
A. equality B. eye C. balance D. distance

18. She ( ) her balance and fell.
A. kept B. lost C. maintained D. reached

19. The cost needs to be balanced ( ) its benefits.
A. against B. to C. at D. for

20. The garden is overgrown with ( ), so I have to ( ) it now.
A. weed, weed B. weeds, weed C. grass, grass D. grasses, grass

Part II. Cloze Test

Music comes in many forms; most countries have a style of their own. __1__ the turn of the century when jazz was born, America had no prominent __2__ of its own. No one knows exactly when jazz was __3__, or by whom. But it began to be __4__ in the early 1900s. Jazz is America's contribution to __5__ music.

In contrast to classical music, which __6__ formal European traditions, jazz is spontaneous and free-form. It bubbles with energy, __7__ the moods, interests, and emotions of the people. In the 1920s jazz __8__ like America, and __9__ it does today.

The __10__ of this music are as interesting as the music __11__. American Negroes, or blacks, as they are called today, were the jazz __12__. They were brought to Southern States __13__ slaves. They were sold to plantation owners and forced to work long __14__. When a Negro died, his friends and relatives __15__ a procession to carry the body to the cemetery. In New Orleans, a band often accompanied the __16__. On the way to the cemetery the band played slow, solemn music suited to the occasion. __17__ on the way home the mood changed. Spirits lifted. Death had removed one of their __18__, but the living were glad to be alive. The band played __19__ music, improvising on both the harmony and the melody of the tunes __20__ at the funeral. This music made everyone want to dance. It was an early form of jazz.

1. A. By B. At C. In D. On

2. A. music B. song C. melody D. style

3. A. discovered B. acted C. invented D. designed

4.	A. noticed	B. found	C. listened	D. heard
5.	A. classical	B. sacred	C. popular	D. light
6.	A. forms	B. follows	C. approaches	D. introduces
7.	A. expressing	B. explaining	C. exposing	D. illustrating
8.	A. appeared	B. felt	C. seemed	D. sounded
9.	A. as	B. so	C. either	D. neither
10.	A. origins	B. originals	C. discoveries	D. resources
11.	A. concerned	B. itself	C. available	D. oneself
12.	A. players	B. followers	C. fans	D. pioneers
13.	A. for	B. as	C. with	D. by
14.	A. months	B. weeks	C. hours	D. times
15.	A. demonstrated	B. composed	C. hosted	D. formed
16.	A. demonstration	B. procession	C. body	D. march
17.	A. Even	B. Therefore	C. Furthermore	D. But
18.	A. number	B. members	C. body	D. relations
19.	A. sad	B. solemn	C. happy	D. funeral
20.	A. whistled	B. sung	C. presented	D. showed

Part III. Reading Comprehension

Passage One

California has been facing a drought for many years now, with certain areas even having to pump freshwater hundreds of miles to their distribution system. The problem is growing as the population of the state continues to expand. New research has found deep water reserves under the state which could help solve their drought crisis. Previous drilling of wells could only reach depths of 1,000 feet, but due to new pumping practices, water deeper than this can now be extracted. The team at Stanford investigated the aquifers（地下蓄水层）below this depth and found that reserves may be triple what was previously thought.

It is profitable to drill to depths more than 1,000 feet for oil and gas extraction, but only recently in California has it become profitable to pump water from this depth. The aquifers range from 1,000 to 3,000 feet below the ground, which means that pumping will be expensive and there are other concerns. The biggest concern of pumping out water from this deep is the gradual settling down of the land surface. As the water is pumped out, the vacant space left is compacted by the weight of the earth above.

Even though pumping from these depths is expensive, it is still cheaper than desalinating（脱盐）the ocean water in the largely coastal state. Some desalination plants exist where feasible, but they are costly to run and can need constant repairs. Wells are much more reliable sources of freshwater, and California is hoping that these deep

wells may be the answer to their severe water shortage. One problem with these sources is that the deep water also has a higher level of salt than shallower aquifers. This means that some wells may even need to undergo desalination after extraction, thus increasing the cost. Research from the exhaustive study of groundwater from over 950 drilling logs has just been published. New estimates of the water reserves now go up to 2,700 billion cubic meters of freshwater.

1. How could California's drought crisis be solved according to some researchers?
   A. By building more reserves of groundwater.
   B. By drawing water from the depths of the earth.
   C. By developing more advanced drilling devices.
   D. By upgrading its water distribution system.
2. What can be inferred about extracting water from deep aquifers?
   A. It was deemed vital to solving the water problem.
   B. It was not considered worth the expense.
   C. It may not provide quality freshwater.
   D. It is bound to gain support from the local people.
3. What is mentioned as a consequence of extracting water from deep underground?
   A. The sinking of land surface.
   B. The harm to the ecosystem.
   C. The damage to aquifers.
   D. The change of the climate.
4. What does the author say about deep wells?
   A. They run without any need for repairs.
   B. They are entirely free from pollutants.
   C. They are the ultimate solution to droughts.
   D. They provide a steady supply of freshwater.
5. What may happen when deep aquifers are used as water sources?
   A. People's health may improve with cleaner water.
   B. People's water bills may be lowered considerably.
   C. The cost may go up due to desalination.
   D. They may be exhausted sooner or later.

Passage Two

暂缺。

Passage Three

While the mission of public schools has expanded beyond education to include social support and extra-curricular activities, the academic schedule has changed little in more than a century.

Reclaiming the school day for academic instruction and escaping the time-bound traditions of education are vital steps in the school-reform process, says a report released today by the National Education Commission on Time and Learning.

The commission's report, titled "Prisoners of Time," calls the fixed clock and calendar in American education a "fundamental design flaw" in desperate need of change. "Time should serve children instead of children serving time," the report says.

The two-year commission found that holding American students to "world-class standards" will require more time for classroom instruction. "We have been asking the impossible of our students—that they learn as much as their foreign peers while spending half as much time in core academic subjects," it states.

The commission compared the relationships between time and learning in Japan, Germany, and the United States and found that American students receive less than half the basic academic instruction that Japanese and German students are provided. On average, American students can earn a high school diploma if they spend only 41 percent of their school time on academics, says the report.

American students spend an average of three hours a day on "core" academics such as English, math, science, and history, the commission found. Their report recommends offering a minimum of 5.5 hours of academics every school day.

The nine-member commission also recommends lengthening the school day beyond the traditional six hours.

"If schools want to continue offering important activities outside the academic core, as well as serving as a hub for family and community services, they should keep school doors open longer each day and each year," says John Hodge Jones, superintendent of schools in Murfreesboro, Tennessee, and chairman of the commission.

The typical school year in American public schools is 180 days. Eleven states allow school years of 175 days or less, and only one state requires more than 180 days.

"For over a decade, education reform advocates have been working feverishly to improve our schools," says Milton Goldberg, executive director of the commission. "But if reform is to truly take hold, the six-hour, 180-day school year should be relegated to museums—an exhibit from our education past."

1. Compared with the academic courses more than a hundred years ago, the academic courses now _____.
   A. include some extra-curricular activities
   B. focus more on education of social support
   C. demand students' greater contribution of time
   D. remain more or less what they used to be
2. The research by the commission mentioned in the passage is most concerned about _____.
   A. the time attributed to academic learning
   B. the components of school education
   C. the changes in education in the recent century
   D. the fashion of education management
3. As mentioned in the passage, schools in the United States do all of the following except _____.
   A. provide important outside-academic activities
   B. serve social units such as family and community
   C. arrange six-hour teaching and learning every day
   D. compete with schools of other countries
4. American students differ from those in Japan and Germany in that _____.
   A. they stay at school for a shorter time every day
   B. they do not learn as much as their counterparts abroad
   C. they devote less time to academic learning
   D. they earn a high school diploma more easily
5. Executive director of the commission Milton Goldberg would most probably agree that _____.
   A. what the education reform advocates have done is not good enough
   B. the length of the school day and school year should be extended
   C. visiting museums can improve students' academic learning ability
   D. social support and extra-curricular activities should be cancelled

Passage Four

The Commercialization of Agriculture in the United States

Thomas Jefferson, a founding father of the United States, believed that farmers were the foundation of American democracy. To execute his plan for democracy, Jefferson proposed the United States Rectangular Land Survey—familiarly known as the grid. Under the plan, surveyors were first sent to eastern Ohio with instructions to divide the land into boxes that would measure six miles square. Then they were instructed to divide these larger boxes into smaller ones, one-mile square, which were divided yet again into quarter sections measuring 160 acres each, considered to be the appropriate size for a single farm. In 1785 Congress passed the grid into law, and from that point on the same checkerboard pattern was etched across the west—one of the most far-reaching attempts at rationalizing a landscape in world history.

The grid was the outward expression of a culture wedded not simply to democracy but to markets and exchange as well. It would aid in the rapid settlement of the country, turning millions of Americans into independent landowners, while at the same time transforming the land itself—its varied topography, soil, and water conditions—into a commodity, a uniform set of boxes easily bought and sold. But the grid was only the first step in the commercialization of western farmlands.

Once farmers purchased land they needed to plow up the existing vegetation. The grasses that thrived on the organically rich, deep soil laid down by the glaciers thousands of years earlier were at first a challenge to cut. Wooden plows with edges made of iron proved virtually useless. The development and spread of the steel plow—invented in 1837 by John Deere, an Illinois blacksmith—made plowing successful. In place of the native vegetation, farmers planted corn and wheat, domesticated species of grass that grow best in a monocultural environment, that is, in fields by themselves. These crops tend to grow quickly, storing carbohydrates in their seeds. With bread constituting a major component of the American diet, wheat would eventually emerge as the west's major cash crop; acres and acres of some of the world's best agricultural land in states such as Ohio, Indiana, Illinois, Iowa, and Kansas were plowed up and given over to the plant.

In the early years of settlement, farmers grew a variety of grains, including wheat, corn, oats, rye, and barley. Increasingly, however, farmers became more specialized, as commercial agriculture, aided by improved railroad transportation, proceeded apace. Much of the grain ended up in the northeast, where, by the 1840s, population growth had outstripped the local farm economy's ability to provide. In effect, the west's surplus of soil wealth underwrote industrial development far to the east.

The railroads not only delivered the products of the rich soils of the western grasslands into the stomachs of easterners, they also changed the meaning of the crops themselves. With waterborne transportation, farmers put their grain into sacks so they could easily be loaded into the irregularly shaped holds of steamboats. The advent of the railroads and steam-powered grain elevators (first developed in 1842) spurred farmers to eliminate the sack altogether. Now grain would move like a stream of water, making its journey to market with the aid of a mechanical device that loaded all the wheat from a particular area into one large grain car. Sacks had preserved the identity of each load of grain. With the new technology, however, grain from different farms was mixed together and sorted by grade. The Chicago Board of Trade (established in 1848) divided wheat into three categories—spring, white winter, and red winter—applying quality standards to each type. Wheat was turned into an abstract commodity, with ownership over the grain diverging from the physical product itself. By the 1860s, a futures market in grain had even emerged in Chicago. It was now possible to enter into a contract to purchase or sell grain at a particular price. What was being marketed here was not the physical grain itself so much as an abstraction, the right to trade something that may not even have been grown yet.

Part IV. Writing

Artificial Intelligence has achieved significant advances in recent years and tools such as ChatGPT are being used to conduct certain tasks previously performed by human beings.

Directions: For this part, you are allowed 30 minutes to write an essay entitled "Can Artificial Intelligence Replace Human Creativity?" You should write at least 250 words.

CHAPTER 4

2013 年转专业英语试题

Part I. Vocabulary and Structure

Directions: There are 20 incomplete sentences in this part. For each sentence there are four choices marked A), B), C) and D). Choose the ONE answer that best completes the sentence. Then mark the corresponding letter on the Answer Sheet with a single line through the centre.

1. Those high school students ( ) to computer games will usually lose interest in their studies.

A. absorbed B. adapted C. approached D. addicted

2. She has won a ( ) prize for her poems published in the past 10 years.

A. privileged B. awarded C. prestigious D. rewarded

3. As they can't have a child of their own, they are going to ( ) a little girl.

A. adapt B. adopt C. adjust D. adept

4. The company has been found guilty violating copyright laws ( ) a regular ( ).

A. for…reason B. by…way C. on…basis D. to…degree

5. The newspaper didn't mention its secret ( ) who provided the information for the event.

A. source B. resource C. origin D. cause

6. The travelers sought shelter ( ) the rain and happened to find a road-side inn for the night.

A. against B. for C. from D. with

7. Not even one life was lost despite the big fire because of the ( ) action of the firemen.

A. prompt B. urgent C. alert D. punctual

8. The civilians who had been injured in the bomb explosion lay screaming in ( ).

A. appeal B. aspiration C. annoyance D. agony

9. In fact, to make life ( ) easier for themselves, some Americans prefer less demanding jobs, even with less pay.

A. somehow B. sometime C. somewhat D. somewhere

10. Convenience foods which are already prepared for cooking are ( ) in grocery stores.

A. ready B. approachable C. probable D. available

11. Economics is the study of how people and a society choose to use scarce ( ) to satisfy people's unlimited wants.

A. sources B. inputs C. materials D. resources

12. Most government insurance programs are designed to protect people from loss of income, either because they have reached ( ) age or because they have lost their job or become disabled.

A. retired B. old C. retirement D. senior

13. Medical care reform has become this country's most important public health ( ).

A. question B. matter C. stuff D. issue

14. The destruction of these treasures was a loss for mankind that no amount of money could ( ).

A. make up for B. come up with C. stand up to D. put up with

15. Although he had looked through all the reference material on the subject, he still found it hard to understand this point and her explanation only ( ) to his confusion.

A. added B. amounted C. extended D. turned

16. Although I liked the appearance of the house, what really made me decide to buy it was the beautiful ( ) through the window.

A. sight B. view C. picture D. look

17. They took ( ) measures to stop poisonous gases from escaping.

A. fruitful B. beneficial C. effective D. valid

18. At first, the speaker was referring to the problem of pollution in the country but halfway in her speech, she suddenly ( ) to another subject.

A. committed B. transmitted C. diverted D. switched

19. She was so ( ) in her job that she didn't hear anybody knocking at the door.

A. absorbed B. drawn C. attracted D. concentrated

20. He finally ( ) his shyness and timidity, stood up and gave us a splendid speech.

A. lost B. attained C. completed D. overcame

Part II. Cloze Test

Directions: There are 20 blanks in the following passage. For each blank there are four choices marked A), B), C) and D). You should choose the ONE that best fits into the passage. Then mark the corresponding letter on the Answer Sheet with a single line through the centre.

A language is a signaling system which operates with symbolic vocal sounds, and which is used by a group of people for the purpose of communication.

Let's look at this __21__ in more detail because it is language, more than anything else, __22__ distinguishes man from the rest of the __23__ world.

Other animals, it is true, communicate with one another by __24__ of cries: for example, many birds utter __25__ calls at the approach of danger; monkeys utter __26__ cries, such as expressions of anger, fear and pleasure. __27__ these various means of communication differ in important ways __28__ human language. For instance, animals' cries do not __29__ thoughts and feelings clearly. This means, basically, that they lack structure. They lack the kind of structure that __30__ us to divide a human utterance into __31__.

We can change an utterance by __32__ one word in it with __33__; a good illustration of this is a soldier who can say, e.g., "tanks approaching from the north", __34__ who can change one word and say "aircraft approaching from the north" or "tanks approaching from the west"; but a bird has a single alarm cry, __35__ means "danger!"

This is why the number of __36__ that an animal can make is very limited: the great tit（山雀）is a case __37__ point; it has about twenty different calls, __38__ in human language the number of possible utterances is

__39__. It also explains why animal cries are very __40__ in meaning.

21. A. definition	B. perception	C. function	D. classification
22. A. it	B. as	C. that	D. which
23. A. physical	B. native	C. animal	D. human
24. A. methods	B. means	C. approaches	D. ways
25. A. warning	B. mating	C. exciting	D. boring
26. A. similar	B. unfamiliar	C. identical	D. different
27. A. Therefore	B. Afterwards	C. But	D. Furthermore
28. A. about	B. from	C. in	D. with
29. A. explain	B. express	C. infer	D. interpret
30. A. enables	B. ensures	C. enforces	D. encourages
31. A. sounds	B. voices	C. speeches	D. words
32. A. saying	B. spelling	C. replacing	D. pronouncing
33. A. others	B. another	C. theirs	D. ours
34. A. and	B. but	C. or	D. so
35. A. it	B. which	C. that	D. this
36. A. marks	B. signs	C. gestures	D. signals
37. A. of	B. in	C. at	D. for
38. A. anyhow	B. somehow	C. since	D. whereas
39. A. boundless	B. limitless	C. ceaseless	D. changeable
40. A. general	B. alike	C. ordinary	D. common

Part III. Reading Comprehension

Directions: There are 4 reading passages in this part. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A), B), C) and D). You should decide on the best choice and mark the corresponding letter on the Answer Sheet with a single line through the centre.

Passage One

Questions 41 to 45 are based on the following passage.

The following is Yitzhak Rabin's last speech, delivered at a peace rally in Tel Aviv on November 4, 1995. The historic handshake between Yitzhak Rabin and Yasir Arafat marked the beginning of the peace process.

Permit me to say that I am deeply moved.

I wish to thank each and every one of you who have come here today to take a stand against violence and for

peace. This government, which I am privileged to head, together with my friend Shimon Peres, decided to give peace a chance—a peace that will solve most of Israel's problems.

I was a military man for 27 years. I fought as long as there was no chance for peace. I believe that there is now a chance for peace, a great chance. We must take advantage of it for the sake of those standing here, and for those who are not here—and there are many.

I have always believed that the majority of the people want peace and are ready to take risks for peace. In coming here today, you demonstrate, together with many others who didn't come, that the people truly desire peace and oppose violence.

Violence erodes the basis of Israeli democracy. It must be condemned and isolated.

This is not the way of the State of Israel. In a democracy there can be differences, but the final decision will be taken in democratic elections, as the 1992 elections which gave us the mandate to do what we are doing, and to continue on this course.

I want to say that I am proud of the fact that representatives of the countries with whom we are living in peace are present with us here, and will continue to be here: Egypt, Jordan, and Morocco, which opened the road to peace for us. I want to thank the president of Egypt, the King of Jordan, and the King of Morocco, represented here today, for their partnership with us in our march towards peace.

But, more than anything, in the more than three years of this Government's existence, the Israeli people has proven that it is possible to make peace, that peace opens the door to a better economy and society, that peace is not just a prayer.

Peace is first of all in our prayers, but is also the aspiration of the Jewish people, a genuine aspiration for peace.

There are enemies of peace who are trying to hurt us, in order to torpedo the peace process.

I want to say bluntly, that we have found a partner for peace among the Palestinians: the PLO, which was an enemy, and has ceased to engage in terrorism. Without partners for peace there can be no peace.

We will demand that they do their part for peace, just as we will do our part for peace, in order to solve the most complicated, prolonged, and emotionally charged aspect of the Israeli-Arab conflict: the Palestinian-Israeli conflict.

This is a course which is fraught with difficulties and pain. For Israel, there is no path that is without pain.

But the path of peace is preferable to the path of war.

I say this to you as one who was a military man, someone who is today Minister of Defense and sees the pain of the families of the IDF soldiers. For them, for our children, in my case for our grandchildren, I want this Government to exhaust every opening, every possibility, to promote and achieve a comprehensive peace. Even with Syria, it will be possible to make peace.

This rally must send a message to the Israeli people, to the Jewish people around the world, to the many people in the Arab world, and indeed to the entire world, that the Israeli people want peace, support peace.

For this, I thank you.

41. The peace-making process between Israel and Palestine started with _____.

A. the election of Yitzhak Rabin as Israel's prime minister
B. the historic meeting between Yitzhak Rabin and Yasir Arafat
C. the speech made by Yitzhak Rabin at a peace rally
D. the death of Yitzhak Rabin after he delivered the speech

42. Which one of the following statements is TRUE according to the passage?

A. The PLO leader Yasir Arafat was present at the peace rally.

B. The president of Egypt was present at the peace rally.

C. Egypt, Jordan and Morocco sent their representatives to the peace rally.

D. Shimon Peres held different opinions with Yitzhak Rabin.

43. Yitzhak Rabin decided to give up military actions mainly because _____.

A. they caused too many deaths

B. they torpedoed Israel's economy

C. they couldn't defend Israel

D. they didn't lead to peace

44. At the peace rally, Yitzhak Rabin sent a message to people around the world that _____.

A. he was determined to promote and achieve a comprehensive peace

B. he was heading the Israeli government

C. he believed differences could co-exist in a democracy

D. he was ready to relieve the pain of the families of the IDF soldiers

45. From the passage we can conclude that _____.

A. Yitzhak Rabin was quite sure that peace was close at hand

B. Yitzhak Rabin still doubted that peace could be made

C. Yitzhak Rabin thought that violence was emotionally charged

D. Yitzhak Rabin believed that there was a chance for peace

Passage Two

Questions 46 to 50 are based on the following passage.

I belong to that classification of people known as wives. I am a Wife. And, not altogether incidentally, I am a mother.

Not too long ago a male friend of mine appeared on the scene fresh from a recent divorce. He had one child, who is, of course, with his ex-wife. He is looking for another wife. As I thought about him while I was ironing one evening, it suddenly occurred to me that I, too, would like to have a wife. Why do I want a wife?

I want a wife who will keep my house clean. A wife who will pick up after my children, a wife who will pick up after me.

I want a wife who will keep my clothes clean, ironed, mended, replaced when need be, and who will see to it that my personal things are kept in their proper place so that I can find what I need the minute I need it. I want a wife who cooks the meals, a wife who is a good cook. I want a wife who will plan the menus, do the necessary grocery shopping, prepare the meals, serve them pleasantly, and then do the cleaning up while I do my studying.

I want a wife who will not bother me with rambling complaints about a wife's duties. But I want a wife who will listen to me when I feel the need to explain a rather difficult point I have come across in my course of studies. I want a wife who will type my papers for me when I have written them.

If, by chance, I find another person more suitable as a wife than the wife I already have, I want the liberty to replace my present wife with another one. Naturally, I will expect a fresh, new life; my wife will take the children and be solely responsible for them so that I am left free.

When I am through with school and have a job, I want my wife to quit working and remain at home so that my wife can more fully and completely take care of a wife's duties.

My God, who wouldn't want a wife?

46. The tone of this passage is _____.

A. informal

B. playful

C. serious

D. ironic

47. According to the passage, a wife should, above all, _____.

A. try her best to please her husband and his friends

B. promote her own career to make herself independent

C. pay much attention to her appearance

D. put her husband's need in the first place

48. According to the passage, when the husband wants to have a new wife, the former wife must _____.

A. leave the house immediately without any hesitation

B. leave the children to her husband to look after

C. leave and take care of the children all by herself

D. try to keep her husband to the family

49. We can infer from the passage that _____.

A. a person of either sex is able to do a wife's job

B. any husband would like to have this type of ideal wife

C. a wife's first responsibility is to take care of the household

D. the roles that men and women play have changed

50. The purpose of the author is _____.

A. to define a woman's responsibilities as a wife

B. to complain about the responsibilities women are supposed to shoulder

C. to explain why she, a woman, wants to have a wife

D. to make clear some misunderstanding concerning a woman's duty

Passage Three

Questions 51 to 55 are based on the following passage.

A normal English family, especially when it has just moved into a new district, wants to be friendly with those living in the same area, yet members of the family often hesitate because there is a fear that some neighbors might want to be too friendly and make such a habit of calling that members of the family could not call their home their own. It is not surprising, therefore, that quite nice people wait for a proper invitation, paying no attention to the casual invitation, "come any time." After moving into new district a married couple will properly join a local organization, political party, parent-teacher association, musical, or literary group, a hobby group, or an evening institute for learning subjects of interest to adults. In this way natural contacts are made and people with some interest in common get to know one other. Very often this leads back to the very street where the newcomers have their home. Neighbors are often a little suspicious about a new resident who begins to talk about family or personal troubles after a brief acquaintance. The British feel that there should be a certain reserve about some things and, in particular, about worrying other people with one's own troubles. It is appreciated that everyone and every family has private problems, and that usually these have to be solved without the help or advice of neighbors.

Yet this is only one side of the picture. It has often been said that British is best in adversity and this applies to community life throughout the country. People do not wait for orders when a resident, or a number of residents, in a neighborhood is in distress; all unite to give freely all the help possible without counting the cost and without any wish for reward.

51. A normal English family doesn't want _____.

A. its neighbors to spend too much time at its own home

B. to be friendly with its neighbors

C. its neighbors to be friendly

D. to spend too much time at its neighbors' homes

52. If a neighbor says, “Come any time”, most English people _____.

A. would not take it as a serious invitation

B. would usually accept the invitation

C. would feel offended by such an invitation

D. would think it means “Do not come”

53. A married couple in a new district likes to meet people by _____.

A. visiting them in their homes

B. inviting them to their house

C. meeting them in organized groups

D. taking up a new hobby or interest

54. The English feel that one should _____.

A. share his problems

B. keep his problems in the family

C. ignore family problems

D. make family problems known

55. If you are in serious difficulty, your neighbors will _____.

A. become your friends for life

B. help you when asked

C. be surprised to hear you are in difficulty.

CHAPTER 5

2012 年转专业英语试题

Part I. Vocabulary and Structure

Directions: There are 20 incomplete sentences in this part. For each sentence there are four choices marked A), B), C) and D). Choose the ONE answer that best completes the sentence. Then mark the corresponding letter on the Answer Sheet with a single line through the centre.

1. We desire that the tour leader ( ) us immediately of any change in plans.

A. inform B. informs C. informed D. has informed

2. There is a man at the reception desk who seems very angry and I think he means ( ) trouble.

A. making B. to make C. to have made D. having made

3. The prices of beer ( ) from 50 cents to 45 per liter during the summer season.

A. alter B. range C. separate D. differ

4. This hotel ( ) $60 for a single room with bath.

A. claims B. demands C. prices D. charges

5. The ticket ( ) you to a free meal in our new restaurant.

A. gives B. grants C. entitles D. credits

6. You have nothing to ( ) by refusing to listen to our advice.

A. gain B. grasp C. seize D. earn

7. In 1914, an apparently insignificant event in a remote part of Eastern Europe ( ) Europe into a great war.

A. inserted B. imposed C. pitched D. plunged

8. We must look beyond ( ) and assumptions and try to discover what is missing.

A. justifications B. illusions C. manifestations D. specifications

9. If you want to know the train schedule, please ( ) at the booking office.

A. acquire B. inquire C. request D. require

10. Last year the advertising rates ( ) by 20 percent.

A. raised B. aroused C. arose D. rose

11. The student was just about to ( ) the question, when suddenly he found the answer.

A. arrive at B. submit to C. work out D. give up

12. We had to ( ) a lot of noise when the children were at home.

A. go in for B. hold on to C. put up with D. keep pace with

13. The French pianist who had been praised very highly ( ) to be a great disappointment.

A. turned up B. turned in C. turned out D. turned down

14. Because of the ( ) emphasis placed on classroom work, the instructor will report your absences to the Adviser.

A. large B. strong C. hard D. high

15. Medical research has shown that the widespread use of cigarettes contributes ( ) the increase of cancers.

A. towards B. for C. with D. to

16. Which sports has the most expenses ( ) training equipment, players' personal equipment and uniforms?

A. in place of B. in terms of C. by means of D. by way of

17. Frankfurt, Germany, is in one of the most ( ) populated regions of Western Europe.

A. densely B. vastly C. enormously D. largely

18. ( ) for the timely investment from the general public, our company would not be as thriving as it is.

A. Had it not been B. Were it not C. Be it not D. Should it not be

19. I can't understand ( ) a decision until it is too late.

A. him to postpone to make B. him to postpone making

C. his postponing to make D. his postponing making

20. Although Anna is happy with her success, she wonders ( ) will happen to her private life.

A. that B. what C. it D. this

Part II. Cloze Test

Directions: There are 20 blanks in the following passage. For each blank there are four choices marked A), B), C) and D). You should choose the ONE that best fits the passage. Then mark the corresponding letter on the Answer Sheet with a single line through the centre.

Why, you may wonder, should spiders be our friends? Because they destroy so many insects, and insects __21__ some of the greatest enemies of the human race. Insects would make __22__ impossible for us to live in the world. They would devour (eat up quickly) all our crops and kill our flocks and herds, were it not __23__ the protection we get from insect-eating animals. We __24__ a lot to the birds and beasts who eat insects but all of them __25__ together kill only a fraction of the __26__ destroyed by spiders. __27__, unlike some of the insect eaters, spiders never do the least __28__ to us or our belongings.

Spiders are not insects, __29__ many people think, __30__ even nearly related to them. One can tell the __31__ almost at a glance, __32__ a spider always has eight legs but an insect never more than six.

How many spiders are __33__ in this work on our __34__? One authority __35__ spiders made a __36__ of the spiders in a grass field in the south of England, and he estimated that there were more than 2 250 000 in one acre; that is __37__ like 6 000 000 spiders of different kinds on a football field. Spiders are busy for at least half the year in killing insects. It is __38__ to make more than the __39__ guess at how many they kill, but they are hungry creatures, not __40__ with only three meals a day.

21. A. include B. involve C. consist D. cover

22. A. this B. that C. it D. them

23. A. with B. for C. of D. on

24. A. devote B. dedicate C. owe D. contribute

25. A. gotten	B. put	C. linked	D. associated
26. A. number	B. amount	C. plenty	D. proportion
27. A. Consequently	B. Moreover	C. Conversely	D. However
28. A. damage	B. ruin	C. good	D. harm
29. A. as	B. which	C. because	D. though
30. A. so	B. either	C. nor	D. none
31. A. likeness	B. difference	C. similarity	D. appearance
32. A. if	B. although	C. for	D. when
33. A. participated	B. joined	C. enclosed	D. involved
34. A. honour	B. sake	C. side	D. behalf
35. A. on	B. in	C. about	D. with
36. A. census	B. consensus	C. conscience	D. consciousness
37. A. nothing	B. something	C. anything	D. everything
38. A. likely	B. useless	C. impossible	D. probable
39. A. broadest	B. widest	C. bravest	D. wildest
40. A. concerned	B. identified	C. patient	D. content

Part III. Reading Comprehension

Directions: There are 4 reading passages in this part. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A), B), C) and D). You should decide on the best choice and mark the corresponding letter on the Answer Sheet with a single line through the centre.

Passage One

Questions 41 to 45 are based on the following passage.

Is language, like food, a basic human need without which a child at a critical period of life can be starved and damaged? Judging from the drastic experiment of Frederick II in the thirteenth century, it may be. Hoping to discover what language a child would speak if he heard no mother tongue, he told the nurses to keep silent.

All the infants died before the first year. But clearly there was more than lack of language here. What was missing was good mothering. Without good mothering, in the first year of life especially, the capacity to survive is seriously affected.

Today no such severe lack exists as that ordered by Frederick. Nevertheless, some children are still backward in speaking. Most often, the reason for this is that the mother is insensitive to the signals of the infant, whose brain is programmed to learn language rapidly. If these sensitive periods are neglected, the ideal time for acquiring skills passes and they might never be learned so easily again. A bird learns to sing and to fly rapidly at the right time, but the process is slow and hard once the critical stage has passed.

Experts suggest that speech stages are reached in a fixed sequence and at a constant age, but there are cases where speech has started late in a child who eventually turns out to be of high IQ. At twelve weeks a baby smiles and makes vowel-like sounds; at twelve months he can speak simple words and understand simple commands; at eighteen months he has a vocabulary of three to fifty words. At three he knows about 1,000 words which he can put into sentences, and at four his language differs from that of his parents in style rather than grammar.

Recent evidence suggests that an infant is born with the capacity to speak. What is special about man's brain, compared with that of the monkey, is the complex system which enables a child to connect the sight and feel of, say, a toy-bear with the sound pattern "toy-bear". And even more incredible is the young brain's ability to pick out an order in language from the mixture of sound around him, to analyze, to combine and recombine the parts of a language in new ways.

But speech has to be induced, and this depends on interaction between the mother and the child, where the mother recognizes the signals in the child's babbling（咿呀学语）, grasping and smiling, and responds to them. Insensitivity of the mother to these signals dulls the interaction because the child gets discouraged and sends out only the obvious signals. Sensitivity to the child's non-verbal signals is essential to the growth and development of language.

41. The purpose of Frederick II's experiment was _____.

A. to prove that children are born with the ability to speak
B. to discover what language a child would speak without hearing any human speech
C. to find out what role careful nursing would play in teaching a child to speak
D. to prove that a child could be damaged without learning a language

42. The reason some children are backward in speaking is most probably that _____.

A. they are incapable of learning language rapidly
B. they are exposed to too much language at once
C. their mothers respond inadequately to their attempts to speak
D. their mothers are not intelligent enough to help them

43. What is exceptionally remarkable about a child is that _____.

A. he is born with the capacity to speak
B. he has a brain more complex than an animal's
C. he can produce his own sentences
D. he owes his speech ability to good nursing

44. Which of the following can NOT be inferred from the passage?

A. The faculty of speech is inborn in man.
B. Encouragement is anything but essential to a child in language learning.
C. The child's brain is highly selective.
D. Most children learn their language in definite stages.

45. If a child starts to speak later than others, he will _____.

A. have a high IQ
B. be less intelligent
C. be insensitive to verbal signals
D. not necessarily be backward

Passage Two

Questions 46 to 50 are based on the following passage.

Not so long ago almost any student who successfully completed a university degree or diploma course could find a good career quite easily. Companies toured the academic institutions, competing with each other to recruit

graduates. However, those days are gone, even in China, and nowadays graduates often face strong competition in the search for jobs.

Most careers organizations highlight three stages for graduates to follow in the process of securing a suitable career: recognizing abilities, matching these to available vacancies and presenting them well to prospective employers.

Job seekers have to make a careful assessment of their own abilities. One area of assessment should be of their academic qualifications, which would include special skills within their subject area. Graduates should also consider their own personal values and attitudes, or the relative importance to themselves of such matters as money, security, leadership and caring for others. An honest assessment of personal interests and abilities such as creative or scientific skills, or skills acquired from work experience, should also be given careful thought.

The second stage is to study the opportunities available for employment and to think about how the general employment situation is likely to develop in the future. To do this, graduates can study job vacancies and information in newspapers or they can visit a careers office, write to possible employers for information or contact friends or relatives who may already be involved in a particular profession. After studying all the various options, they should be in a position to make informed comparisons between various careers.

Good personal presentation is essential in the search for a good career. Job application forms and letters should, of course, be filled in carefully and correctly, without grammar or spelling errors. Where additional information is asked for, job seekers should describe their abilities and work experience in more depth, with examples if possible. They should try to balance their own abilities with the employer's needs, explain why they are interested in a career with the particular company and try to show that they already know something about the company and its activities.

46. Which of the following is true of the graduates of the past?

A. They could enter the academic institutions easily.
B. They faced strong competition in the search for jobs except in China.
C. They had hardly any problem in finding a good job.
D. They should tour many companies to find a good job.

47. According to paragraph 3, self-assessment should include examination of oneself in _____.

A. academic qualification and personal values, as well as personal interests and abilities
B. academic qualification, personality and scientific skills
C. academic qualification, work experience and communicative skills
D. academic qualification, family background and creativity

48. In presenting abilities to prospective employers, job seekers should _____.

A. show their relation with the company
B. fill in the application forms in great detail
C. provide additional information
D. take the employers' needs into consideration

49. Which of the following can be inferred from the passage?

A. Good personal presentation will ensure job seekers' success in the application for any career.
B. A lot of preparation has to be made before job seekers present themselves to a certain company.
C. Companies pay more attention to the academic qualifications of job seekers.
D. The success of securing a suitable career lies in the number of friends involved in that profession.

50. The purpose of this article is _____.

A. emphasize the importance of finding a good job

B. describe the competition in finding a good job

C. provide suggestion on finding a good job

D. discuss the relationship between employers and employees

Passage Three

Questions 51 to 55 are based on the following passage.

For decades, the population explosion has been giving people nightmares. The world's human population increases by three every second and by a billion—equivalent to the present population of China—every decade.

With figures such as these, the gloom has been understandable. In his 1968 book *The Population Bomb*, Paul Ehrlich wrote: "The battle to feed all of humanity is over. In the 1970s, the world will undergo famines; hundreds of millions of people are going to starve in spite of the crash programmes embarked upon now."

He was wrong. Like other scientists, he underestimated the effects of the Green Revolution, which was transforming agricultural productivity even as he wrote. But he was at least in good company. The physicist Lord Blackett spent much of the 1960s worrying about how India was going to feed its millions, even as new varieties of wheat and rice were making that task easier.

Today, environmentalists argue that the crisis has been deferred, not avoided. Like Malthus three centuries ago, they believe that man will ultimately outgrow his ability to feed himself. Were population to increase for ever, that would certainly be true. However, while the pundits have been worrying, people everywhere have been changing their habits.

World population is still rising fast, but it is already plain that the worst forecasts will never become reality. Far from reaching fifteen billion, nearly three times today's figure, the odds are that it may never get to ten billion. The United Nations now believes that population will peak at 9.4 billion in about 50 years. While that is still a huge number, it is probably manageable.

51. Which of the following choices best explains the meaning of the word "gloom" in the first sentence of paragraph 2?

A. the feeling of sadness and hopeless

B. expected results

C. hope and expectation

D. widespread excitement

52. Which of the following is true of Paul Ehrlich?

A. He didn't know anything about Green Revolution.

B. He worked in a farming company.

C. His opinion on population were similar to those of Lord Blackett.

D. He was the person who worried the most about population explosion.

53. Environmentalists of today believe that _____.

A. population crisis will happen sooner or later

B. population crisis can be avoided

C. man has his ability to feed himself

D. Malthus's ideas are not right

54. Which of the following may the author agree to?

A. World population will continue to grow all the time.

B. There will be a peak for world population.

C. If world population reaches 10 billion, the situation will be out of control.

D. Some of the worst forecasts will come true some day.

55. The author's overall attitude toward global population is _____.

A. objective
B. critical
C. optimistic
D. pessimistic

Passage Four

Questions 56 to 60 are based on the following passage.

A new British medical instrument is about to change dramatically our ability to recognize disease hidden inside the body. It is called the magnetic scanner, and it gives information about the body which current machines, such as the brain scanner and the more recent body scanner, cannot provide. And unlike existing machines the new machine does not use X-ray radiation waves, which makes it much safer for patients.

Unlike existing scanners, a magnetic scanner can show the side or the back of a suspect part of the body. Used on, for example, a lung with suspected damage, it can turn the image of the lung to give a series of different views. The image is not simply worked out in the computer's "imagination": the magnetic scanner actually examines every side of the lung.

When examining the softer part of the body with existing scanners, doctors frequently have to use a "contrast medium" to make a muscular organ show up to X-ray waves. The usual "contrast medium" given to patients before a stomach X-ray scan takes place is harmless, but for some brain-scans a "contrast medium" has to be given in an injection so that it passes into the brain. This is unpleasant and painful and it can be dangerous. The magnetic scanner needs no "contrast medium".

The new machine can also see in greater detail than ever before. Growths of all kinds show up clearly on the brain and so do the dead patches which are the signs of the disease cancer. Until now patients complaining of double vision or an inability to control their muscles from time to time could be suffering from cancer or from some much more easily cured disease, and a brain scanner could not distinguish between these with certainty. The doctor can now definitely say whether or not cancer is present. Previously, these diseases have been missed and patients have been given false information about their health. The technique is still improving with great speed; pictures produced a couple of years ago look very simple compared with those of today.

56. What does the new magnetic scanner machine do?

A. It looks at a diseased part of the body from all directions.
B. It can look right through a diseased part of the body.
C. It sends waves round the diseased part of the body.
D. It uses a computer to "imagine" different views of the body.

57. What disadvantage do existing machines have?

A. Patients need an injection before they are used.
B. The contrasts recorded are too strong.
C. It is often necessary to use a contrast medium.
D. The X-ray waves are sometimes painful.

58. In what way is the new machine an improvement?

A. It can cure some diseases much more easily.
B. It will never give a double view.
C. The techniques involved can be learnt quickly.
D. It can show all the details of a diseased part of the body.

59. The machine is useful in identifying the disease, cancer, because it shows _____.

A. dark spots in the eyes
B. dead areas in the brain
C. cancer-like growths
D. damage to muscles

60. What is the author's attitude toward the machines mentioned in the article?

A. He is in favour of the new one.

B. He is in favour of the previous one.

C. He is in favour of neither of them.

D. He is in favour of both of them.

Part IV. Writing

Directions: By the end of this semester, you will have spent half a year at the university and you may have noticed that many students are late for classes. Now, please write an essay of about 250 words on the following topic:

My View on College Students Being Late for Classes

Marks will be awarded for content, organization, grammar and appropriateness. Please write your essay in legible handwriting. You should write this composition on the Composition Sheet.

华中科技大学转专业交流群

CHAPTER 6

2011 年转专业英语试题

Part I. Vocabulary and Structure

1. By computation, he estimated that the repairs on the house would cost him ( ) a thousand dollars.

A. coarse B. rude C. crude D. rough

2. When trapped in drifting sands, do not struggle, or you will be ( ) in deeper.

A. absorbed B. pushed C. heaved D. sucked

3. If a person talks about his weak points, his listener is expected to say something in the way of ( ).

A. persuasion B. remedy C. encouragement D. compromise

4. A budget of five dollars a day is totally ( ) for a trip round Europe.

A. inadequate B. incapable C. incompatible D. invalid

5. The presidential candidate ( ) his position by winning several primary elections.

A. enforced B. enriched C. intensified D. consolidated

6. Under the guidance of their teacher, the pupils are building a model boat ( ) by steam.

A. towed B. pressed C. tossed D. propelled

7. Fiber-optic cables can carry hundreds of telephone conversations ( ).

A. simultaneously B. spontaneously C. homogeneously D. contemporarily

8. We must look beyond ( ) and assumptions and try to discover what is missing.

A. justifications B. illusions C. manifestations D. specifications

9. When the farmers visited the city for the first time, they were ( ) by its complicated traffic system.

A. evoked B. bewildered C. diverted D. undermined

10. Doctors are often caught in a ( ) because they have to decide whether they should tell their patients the truth or not.

A. puzzle B. perplexity C. dilemma D. bewilderment

11. Everybody ( ) in the hall where they were welcomed by the secretary.

A. assembled B. accumulated C. piled D. joined

12. Medical doctors sometimes can make mistakes that will cost ( ).

A. patients their lives B. patient lives C. patients for their lives D. patients with their lives

13. ( ) money, she is quite rich. However this does not mean that she is happy.

A. Concerning B. As to C. In terms of D. In the light of

14. He was completely ( ) by the thief's disguise.

A. taken away B. taken down C. taken in D. taken through

15. His tastes and habits ( ) with those of his wife.

A. combine B. compete C. coincide D. compromise

16. Why didn't you tell me you could lend me the money? I ( ) it from the bank.

A. haven't needed to borrow B. will not need to borrow

C. needn't have borrowed D. didn't need to borrow

17. At last she left her house and got to the airport, only ( ) the plane flying away.

A. having seen B. to have seen C. saw D. to see

18. It was only after some progress ( ) in the use and development of electric current that man began to realize the importance and possibilities of magnetism.

A. was made B. would have been made C. has been made D. had been made

19. ( ) that the trade between the two countries reached its highest point.

A. During the 1960's B. It was in the 1960's

C. That it was in the 1960's D. It was the 1960's

20. She didn't regret paying 200 dollars for the bookcase. As a matter of fact, she would gladly have paid ( ) for it.

A. as much twice B. much as twice C. as twice much D. twice as much

Part II. Cloze Test

How should gifted children be identified? Parents may not be able to identify gifted children; they do not have sufficient basis for 21 . Their 22 may be 23 by their ambitions. 24 , they may be able to 25 details about the child's early development that indicate to the 26 teacher or psychologist the 27 of superior ability. Teachers who are familiar 28 the characteristics of gifted children and who have a chance to observe children in an informal and challenging environment can give 29 that is 30 in identifying the gifted. Teachers have daily opportunity to observe how skillfully children use language, how quickly they see relations, how 31 they are to things in their environment, how readily they learn, how easily they remember. 32 , gifted children usually show outstanding 33 and imagination, sustained attention, and wide interests. Classroom and playground also offer opportunities to identify children who get along exceptionally well with others and 34 frustrating situations with exceptional maturity. It is most rewarding to study children's 35 in groups. However, teachers have been given little help in using these daily opportunities to identify and educate the 36 gifted. 37 parental observation, teacher observation also has its 38 . Some teachers have a tendency to 39 the abilities of docile, obedient, conscientious children. Others fail to recognize potential giftedness that is 40 by emotional conflicts or by boredom with dull routinized, teacher-dominated situations.

21. A. similarity B. exposition C. comparison D. analysis

22. A. remarks B. observations C. observatory D. investigation

23. A. distorted B. transformed C. magnified D. exaggerated

24. A. However B. Thus C. But D. Moreover

25. A. Complement B. furnish C. ornament D. utilize

26. A. discerning B. alert C. watchful D. analytical

27. A. being B. possession C. occupation D. presence

28. A. to	B. with	C. about	D. of
29. A. illustration	B. testimony	C. manifestation	D. evidence
30. A. valueless	B. worthless	C. invaluable	D. invalid
31. A. sensitive	B. sensible	C. reactive	D. responsive
32. A. Nevertheless	B. Conversely	C. Likewise	D. Moreover
33. A. resourcefulness	B. resource	C. imagery	D. potentials
34. A. deal	B. resolve	C. control	D. handle
35. A. interaction	B. communication	C. reaction	D. exchange
36. A. socially	B. academically	C. intellectually	D. sociably
37. A. Unlike	B. Like	C. Likewise	D. As
38. A. advantages	B. pitfalls	C. privilege	D. merits
39. A. overrate	B. overestimate	C. overlook	D. overcharge
40. A. suppressed	B. depressed	C. compressed	D. oppressed

Part III. Reading Comprehension

Passage One

Being a man has always been dangerous. There are about 105 males born for every 100 females, but this ratio drops to near balance at the age of maturity, and among 70-year-olds there are twice as many women as men. But the great universal of male mortality is being changed. Now, boy babies survive almost as well as girls do. This means that, for the first time, there will be an excess of boys in those crucial years when they are searching for a mate. More important, another chance for natural selection has been removed. Fifty years ago, the chance of a baby (particularly a boy baby) surviving depended on its weight. A kilogram too light or too heavy meant almost certain death. Today it makes almost no difference. Since much of the variation is due to genes, one more agent of evolution has gone.

This is another way to commit evolutionary suicide: stay alive, but have fewer children. Few people are as fertile as in the past. Except in some religious communities, very few women have 15 children. Nowadays the number of births, like the age of death, has become average. Most of us have roughly the same number of offspring. Again, differences between people and the opportunity for natural selection to take advantage of it have diminished. India shows what is happening. The country offers wealth for a few in the great cities and poverty for the remaining tribal peoples. The grand mediocrity of today—everyone being the same in survival and number of offspring—means that natural selection has lost 80% of its power in upper-middle-class India compared to the tribes.

For us, this means that evolution is over; the biological Utopia has arrived. Strangely, it has involved little physical change. No other species fills so many places in nature. But in the past 100,000 years even the past 100 years—our lives have been transformed but our bodies have not. We did not evolve, because machines and society did it for us. Darwin had a phrase to describe those ignorant of evolution: they "look at an organic being as a savage looks at a ship, as at something wholly beyond his comprehension." No doubt, we will remember a 20th century way of life beyond comprehension for its ugliness. But however amazed our descendants may be at how far from Utopia we were, they will look just like us.

41. What used to be the danger in being a man according to the first paragraph?

A. A lack of mates.
B. A fierce competition.
C. A lower survival rate.
D. A defective gene.

42. Which of the following is true according to the second paragraph?

A. Modern people tend to have few children because of irresponsibility.
B. Women reproducing fifteen children can still be found in some religious communities.
C. Upper-middle class Indian women are more fertile than tribal women.
D. Every year the death age amounts to the number of birth now.

43. What does the example of India illustrate?

A. Wealthy people tend to have fewer children than poor people.
B. Natural selection hardly works among the rich and the poor.
C. The middle class population is 80% smaller than that of the tribes.
D. India is one of the countries with a very high birth rate.

44. The author argues that our bodies have stopped evolving because _____.

A. life has been improved by technological advance
B. the number of female babies has been declining
C. our species has reached the highest stage of evolution
D. the difference between wealth and poverty is disappearing

45. Which of the following would be the best title for the passage?

A. Sex Ratio Changes in Human Evolution
B. Ways of Continuing Man's Evolution
C. The Evolutionary Future of Nature
D. Human Evolution Going Nowhere

Passage Two

Laziness is a sin, everyone knows that. We have probably all had lectures pointing out that laziness is immoral, that it is wasteful, and that lazy people will never amount to anything in life.

But laziness can be more harmful than that and it is often caused by more complex reasons than simple wish to avoid work. Some people who appear to be lazy are suffering from much more serious problems. They may be so distrustful of their fellow workers that they are unable to join in any group task for fear of ridicule or fear of having their ideas stolen. These people who seem lazy may be paralyzed by a fear of failure that prevents fruitful work.

Or other sorts of fantasies may prevent work; some people are so busy planning, sometimes planning great deeds or fantastic achievements, that they are unable to deal with whatever "less" work is on hand. Still other people are not avoiding work strictly speaking; they are merely rescheduling their day.

Laziness can actually be helpful. Like procrastinators, some people may look lazy when they are really thinking, planning, contemplating, researching. We should all remember that some great scientific discoveries occurred by chance or while someone was "goofing off." Newton wasn't working in the orchard when the apple hit him and he devised the theory of gravity. All of us would like to have someone "lazy" build the car or stove we buy, particularly if that "laziness" were caused by the workers taking time to check each step of his work and to do his job right. And sometimes, being "lazy" —that is, taking time off for a rest—is good for the overworked student or executive. Taking a rest can be particularly helpful to the athlete who is trying too hard or the doctor who's simply working himself overtime too many evenings, at the clinic. So be careful when you are tempted to call somebody lazy. That person may be thinking, resting, or planning his or her next work.

46. The main idea of this passage is that _____.

A. laziness is a moral sin

B. there are advantages and disadvantages in being lazy

C. laziness is the sign of deep-seated emotional problem

D. lazy people do more careful work

47. The passage states that _____.

A. laziness is a disease

B. some people are lazy because they are insecure

C. laziness is more beneficial than harmful

D. a good definition of laziness is emotional "illness"

48. Which of the following conclusion does the passage support?

A. The word laziness is sometimes applied incorrectly.

B. Most of the time laziness is a virtue.

C. Most assembly line workers are lazy.

D. Most insecure people are lazy.

49. The word procrastinate means _____.

A. overwork B. put things off

C. set priorities D. supervise

50. The word devised means _____.

A. formulated B. understood

C. wrote D. proved

Passage Three

Crying is hardly an activity encouraged by society. Tears, be they of sorrow, anger, or joy, typically make Americans feel uncomfortable and embarrassed. The shedder of tears is likely to apologize, even when a devastating (毁灭性的) tragedy was the provocation. The observer of tears is likely to do everything possible to put an end to the emotional outpouring. But judging from recent studies of crying behavior, links between illness and crying and the chemical composition of tears, both those responses to tears are often inappropriate and may even be counterproductive.

Humans are the only animals definitely known to shed emotional tears. Since evolution has given rise to few, if any, purposeless physiological responses, it is logical to assume that crying has one or more functions that enhance survival.

Although some observers have suggested that crying is a way to elicit assistance from others (as a crying baby might from its mother), the shedding of tears is hardly necessary to get help. Vocal cries would have been quite enough, more likely than tears to gain attention. So, it appears, there must be something special about tears themselves.

Indeed, the new studies suggest that emotional tears may play a direct role in alleviating stress. University of Minnesota researchers who are studying the chemical composition of tears have recently isolated two important chemicals from emotional tears. Both chemicals are found only in tears that are shed in response to emotion. Tears shed because of exposure to a cut onion would contain no such substance.

Researchers at several other institutions are investigating the usefulness of tears as a means of diagnosing human ills and monitoring drugs.

At Tulane University's Tear Analysis Laboratory Dr. Peter Kastle and his colleagues report that they can use tears to detect drug abuse and exposure to medication (药物), to determine whether a contact lens fits properly

or why it may be uncomfortable, to study the causes of "dry eye" syndrome and the effects of eye surgery, and perhaps even to measure exposure to environmental pollutants.

At Columbia University Dr. Lissy Faris and colleagues are studying tears for clues to the diagnosis of diseases away from the eyes. Tears can be obtained painlessly without invading the body and only tiny amounts are needed to perform highly refined analyses.

51. It is known from the first paragraph that _____.

A. shedding tears gives unpleasant feelings to American

B. crying may often irritate people or even result in tragedy

C. crying usually wins sympathy from other people

D. one who sheds tears in public will be blamed

52. What does "both those responses to tears" (Line 6, Para. 1) refer to?

A. Crying out of sorrow and shedding tears for happiness.

B. The embarrassment and unpleasant sensation of the observers.

C. The tear shedder's apology and the observer's effort to stop the crying.

D. Linking illness with crying and finding the chemical composition of tears.

53. "Counterproductive" (Lines 6–7, Para. 1) very probably means "_____".

A. having no effect at all

B. leading to tension

C. producing disastrous impact

D. harmful to health

54. What does the author say about crying?

A. It is a pointless physiological response to the environment.

B. It must have a role to play in man's survival.

C. It is meant to get attention and assistance.

D. It usually produces the desired effect.

55. What can be inferred from the new studies of tears?

A. Emotional tears have the function of reducing stress.

B. Exposure to excessive medication may increase emotional tears.

C. Emotional tears can give rise to "dry eye" syndrome in some cases.

D. Environmental pollutants can induce the shedding of emotional tears.

Passage Four

It is no secret among athletes that in order to improve performance you've got to work hard. However, hard training breaks you down and makes you weaker. It is rest that makes you stronger. Improvement only occurs during the rest period following hard training. This adaptation is accomplished by improving efficiency of the heart and certain systems within the muscle cells. During recovery periods these systems build to greater levels to compensate for the stress that you have applied. The result is that you are now at a higher level of performance. If sufficient rest is not included in a training program, imbalance between excess training and inadequate rest will occur, and performance will decline. The "overtraining syndrome(综合症)" is the name given to the collection of emotional, behavioral, and physical symptoms due to overtraining that has persisted for weeks to months. It is marked by cumulative exhaustion that persists even after recovery periods.

The most common symptom is fatigue. This may limit workouts and may be present at rest. The athlete may also become moody, easily irritated, have altered sleep patterns, become depressed, or lose the competitive desire and enthusiasm for the sport. Some will report decreased appetite and weight loss. Physical symptoms include persistent muscular soreness, increased frequency of viral(病毒性的) illnesses, and increased incidence of injuries.

The treatment for the overtraining syndrome is rest. The longer the overtraining has occurred the more rest required. Therefore, early detection is very important. If the overtraining has only occurred for a short period of time (e.g. 3–4 weeks) then interrupting training for 3–5 days is usually sufficient rest. It is important that the factors that lead to overtraining be identified and corrected. Otherwise, the overtraining syndrome is likely to recur.

The overtraining syndrome should be considered in any athlete who manifests symptoms of prolonged fatigue and whose performance has leveled off or decreased. It is important to exclude any underlying illness that may be responsible for the fatigue.

56. The first paragraph of the passage tells us that _____.

A. the harder an athlete trains, the better his performance will be

B. rest after vigorous training improves an athlete's performance

C. strict systematic training is essential to an athlete's top performance

D. improvement of an athlete's performance occurs in the course of training

57. By "overtraining" the author means _____.

A. a series of physical symptoms that occur after training

B. undue emphasis on the importance of physical exertion

C. training that is not adequately compensated for by rest

D. training that has exceeded an athlete's emotional limits

58. What does the passage tell us about the "overtraining" syndrome?

A. It occurs when athletes lose interest in sports.

B. It appears right after a hard training session.

C. The fatigue it results in is unavoidable in the athlete's training process.

D. It manifests itself in fatigue which lingers even after a recovery period.

59. What does the phrase "level off" (Line 7, Para. 4) most probably mean?

A. Slow down. B. Become dull.

C. Stop improving. D. Be on the decline.

60. The author advises at the end of the passage that _____.

A. overtraining syndrome should be treated as a serious illness

B. overtraining syndrome should be prevented before it occurs

C. an athlete with overtraining syndrome should take a lengthy rest

D. illness causing fatigue should not be mistaken for overtraining syndrome
